

PRESS RELEASE 06/2008

Visualisation specialists Realtime Technology's communication platform opens up new avenues for programmers and application developers.

"Do it yourself" – RTT presents the RTT *Open* Community Platform

Munich, 18 June 2008 – It's open day at Realtime Technology AG (RTT). This marks the kick-off for the RTT *Open* communication forum (www.rttopen.com). It gives creative software developers and talented junior programmers the opportunity to make custom developments to the award-winning RTT DeltaGen visualisation software in line with their own requirements. Over the past few years, RTT DeltaGen has become established the standard tool in the high-end visualisation market.

RTT *Open* allows programmers and software developers to try out and learn about RTT applications and functions under their own steam. While engaging in active discussion with other forum members, users can inventively 'play around' with the RTT software and, for example, write CgFX shaders or external applications for RTT software solutions. RTT *Open* has something for everyone, regardless of whether the focus is on attractive visual optical characteristics, or control or configuration applications. The online forum opens up new perspectives on development for all programmers who are passionate about what they do, including professional developers, software designers, researchers, professors and students.

Free RTT DeltaGen Licences for Students

As part of the RTT *Open* initiative, RTT is issuing free RTT DeltaGen licences to students at research institutes and universities. Students must be in possession of a valid matriculation card to obtain one. The software licence is valid for six months and can, of course, be extended.

"We are using RTT *Open* to make our software solutions accessible to a broad base of users. This allows users to learn about the essential tool of the visualisation market in a playful environment and allows us to draw from a large pool of creative ideas when making key developments to the software" states Ludwig A. Fuchs, co-founder and board member of Realtime Technology AG.

Interested parties can register for the forum immediately by filling in the online form at www.rttopen.com.
